

Framatome to extend outage services to PSEG for long-term plant operations

October 12, 2022 – Framatome announced the extension of its integrated outage services to support long-term operations for utility customer PSEG Nuclear. Framatome will provide refueling, non-destructive examination and steam generator services for Salem Units 1 and 2 and Hope Creek.

“Framatome’s maintenance and inspection teams have a long history of delivering with excellence and a focus on continuous improvement for PSEG,” said Catherine Cornand, senior executive vice president of Installed Base for Framatome. “Our customer’s confidence is built on our proven performance and the high standards of our North American teams to ensure the safe, reliable and long-term operations of nuclear power plants in the U.S.”

Framatome has provided a wide range of outage and maintenance services to PSEG for nearly 20 years and will continue to do so at both the Salem and Hope Creek nuclear plants.

Framatome’s refueling outage services

Framatome works with utilities worldwide on a variety of outage services, including reactor maintenance, inspections, fuel reloading operations and outage management optimization. Building on this expertise, Framatome along with PSEG teams will perform services during these outages to optimize performance and manage project commitments for seamless outage results.

The PSEG Nuclear Salem and Hope Creek generating stations produce nearly half of New Jersey’s electricity and more than 90 percent of the state’s air pollution-free generation. The Salem units are pressurized water reactors, and the Hope Creek unit is a boiling water reactor. Together they generate enough electricity for three million homes each day. The plants, and their more than 1,600 employees, help keep electricity rates affordable, support reliability of the grid and reduce public health costs.

About Framatome

Framatome is an international leader in nuclear energy recognized for its innovative, digital and value added technologies for the global nuclear fleet. With worldwide expertise and a proven track record for reliability and performance, the company designs, services and installs components, fuel, and instrumentation and control systems for nuclear power plants. Its more than 15,000 employees work every day to help Framatome’s customers supply ever cleaner, safer and more economical low-carbon energy.
