

Image recording system for safe inspection data storage

Secure and trace your inspections recordings with VIPER-S (Video and Images..., in compliance with the industrial regulations.

Challenge

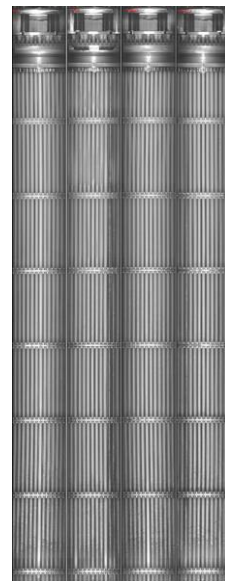

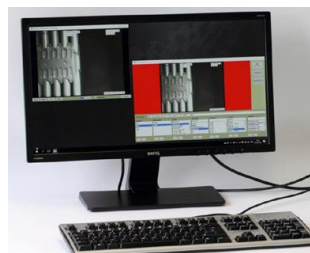

Visual inspections of fuel assemblies and core components and their assessment by the inspection specialists are demanding activities that contribute to the goal of safe operation of fuel assemblies and core components. The data generated from the video or image recordings must be documented and archived in accordance with applicable standards.

Solution

The VIPER-S has been developed by inspection specialists for inspection specialists, to meet the highest requirements of secure digital recording and storage and the industry standards. The integrated video and picture entitling's software supports digital documentation and archiving of data files.

Customer benefits

- The tool enables digital archiving and titling of individual data files directly to the related project, object or results data; a key functionality to secure cost-effective data archiving.
- The stored attributes guarantee an efficient finding of the data file on the customer's own data server and support in the creation of statistics - for example search of fuel assembly with foreign objects.
- Framatome's own development guarantees complete customer support.
