

PATCH AVAILABILITY REPORT

Simplify Patch Management with Patch Availability Report (PAR) solution

Enhance your security and stay resilient against evolving vulnerabilities with our of-the-shelf patch management solution.

Challenge

Maintenance and cybersecurity specialists in critical industries constantly face pressure to maintain precise asset inventory, identify vulnerabilities, and proactively address security risks. Patch management is crucial for reducing risk and resolving vulnerabilities in complex industrial systems.

In North America, the Department of Energy and Transportation Security Administration require patch management for industrial entities, while Europe is enforcing similar regulations for critical infrastructure providers.

Solution

Framatome Cybersecurity offers Patch Availability Report (PAR) service, helping you to improve your patch management program, including:

- Continuous monitoring of software vendors for new security patches and firmware updates.
- Monthly intelligence reports tailored to your organization's hardware and software assets.
- Information on security and functional patches, including remediation updates.
- A visualization module to help identify where to focus patch management efforts.
- Reports in both human- and machine-readable formats.

Overall, our service team streamlines your risk assessment, allowing you to prioritize remediation efforts and concentrate on your core business.

Customer benefits

- **Single-source of trust**, simplifying compliance.
- **Save your time and money**, by streamlining the patch management process.
- **Reduce risk**, by helping you to identify and patch vulnerabilities quickly.
- **Improve visibility** into your software assets and vulnerabilities.

Your performance is our everyday commitment

@ EDF

Technical information

- **Customized report** once per month.
- **One delivery source:** All your assets and vendors consolidated into a single source.
- **Security scope:** Leveraging PAR reports and the ICS Update Patch Visualization Engine to prioritize where to focus your efforts.
- **Lifecycle management:** Documentation confirming end-of-life status.
- **Third-party integrations:** Seamlessly integrating our reports into your existing system with automated vendor collaborations.

Key figures

90% of OT cyberattacks are successful.

OT Security: The State of Play by SecurityScorecard

17% of industrial organizations have a mature and systematic approach to patch management.
